

Clinical study on the immediate effectiveness of the Placentor Végétal Age-Defying Mask after cosmetic dermatology treatment

Laboratoire SICOBEL has carried out a study to test the immediate effectiveness of the Age-Defying Mask following cosmetic dermatology treatments such as mild peeling, laser skin treatment, pulsed light therapy, injections or mesolift (facial mesotherapy).

The study was carried out by 11 dermatologists/cosmetic practitioners on 179 patients during February and March 2007. A questionnaire was filled in by the doctor and the patient together after the mask had been applied following cosmetic dermatology treatment.

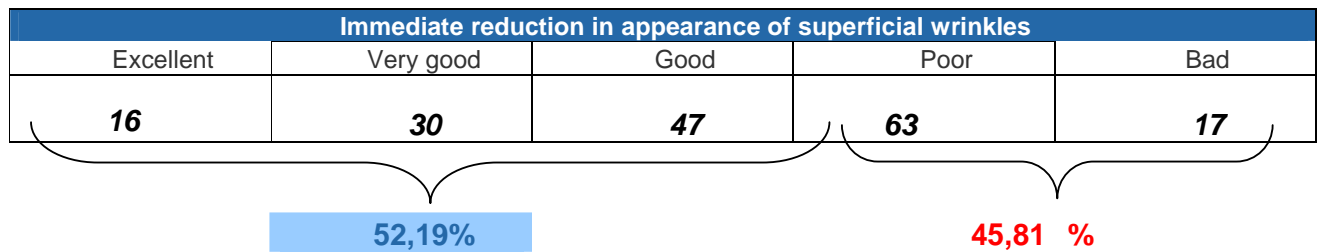

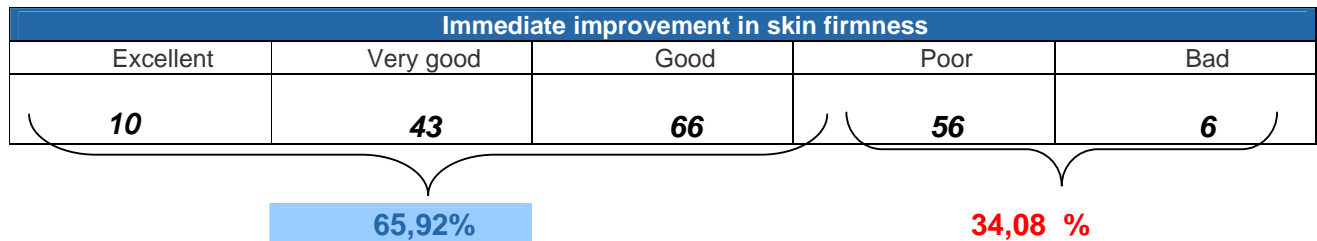

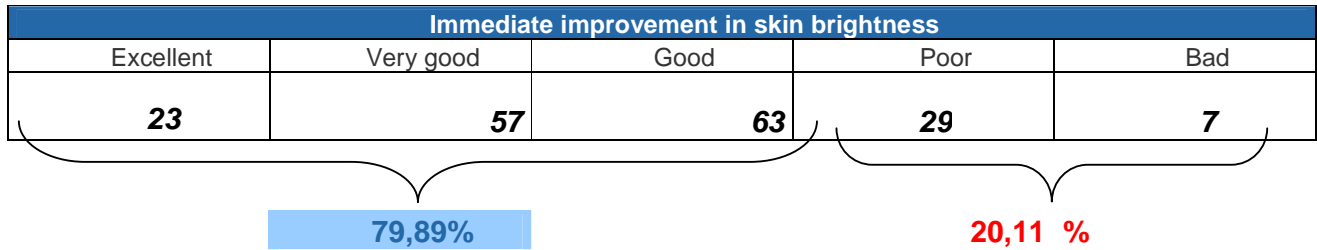

The results are as follows:

	Average age	Average age	Average age	Average age	Average age
Women	20-30	31-40	41-50	51-60	over 60 years
158	7	27	58	55	32

Immediate soothing feeling				
Excellent	Very good	Good	Poor	Bad
51	76	42	10	0
94,41%			5,59 %	

Immediate reduction in redness				
Excellent	Very good	Good	Poor	Bad
35	57	70	21	1
88,27%			11,73 %	

Immediate re-moisturizing				
Excellent	Very good	Good	Poor	Bad
31	73	56	22	3
86,59%			13,41 %
